Second-Level

(emanatio)(pneuma)(heat)(adust melancholic vapors) (acute burning)(this operation is manifesting strongly) (slow dispersio)(heat)(this operation is manifesting strongly) (frothing)(genitals)(hot and dry) (air and environment regimen)(congested blockage that is actively venting toxic gas) (heat)(motio) (one degree of melancholic vapors) (air and environment regimen)(body)(caliditas) (evacuation and repletion regimen)(intense moisture)(caliditas) (hardening of sludge by heat) (innate heat)(caliditas)

(cholera) (heat) (blockage) (intense boiling)(primordial moisture) (innate heat) (motio)(intense moisture)(congealing) (inflation) (motion and rest regimen)(very intense moisture)(adust) (caliditas) (evacuation and repletion regimen)(inflation) (slow dispersio)(melancholic vapors) (slow motio)(melancholic vapors) (sense organs)(hot and dry) (hardening of sludge by heat) (regimen for adust) (balanced pneuma)

(blood)(intense congestion)(hot and dry) (boiling)(primordial moisture)(caliditas) (boiling)(this operation is manifesting moderately)

Human-Generated Translation (Best Guess)

"Emanating pneuma hot adust vapors (probably meaning: 'bad breath'). The heat is happening strongly and affecting the innate heat. Slowly distributing toxic, unnatural ash is an operation that is manifesting strongly. Hot and dry frothing in the genitals. Air and environment regimen for the congested blockage that is actively venting toxic gas. Heat moves through air one degree of black bile. Second air environment regimen for the body's heat. Regimen to evacuate and replete with double warm moisture. The sludge will harden by the heat. Vitality will increase. Cholera heat blockage. Intense boiling of phlegm. Innate heat moves the intense moisture of burnt phlegm. Inflation. Motion and rest regimen very intense moisture to clear out the blockage. Slow distribution of warm sludge. Regimen to evacuate and replete happening strongly. Slow distribution of melancholic vapors. Slow motion of melancholic vapors. Sense organs hot and dry. The sludge will harden by the heat. Regimen for adust. Balanced pneuma. Clotted mass intense moisture warms. Warmed boiled phlegm. Boiling balanced pneuma."
