SECOND-LEVEL

(emanatio) (fast motio) (hot and dry) (warmed spirit)
(fever) (brain) (hot and dry) (slow dispersio) (hot and dry) (boiling) (hot and dry)
(air and environment regimen) (shivers) (slow emanatio) (invigorating the constitution)
(fast emanatio) (wind) (slow generatio) (wind)

(exhaustion of the moisture) (liver) (hot and dry) (motion and rest regimen) (hot and dry) (motion and rest regimen) (crude concoction) (motion and rest regimen) (inflation) (glassy phlegm) (glassy phlegm) (fast motio) (inflation) (temper corruption) (nourish the frame)

(regimen administered) (gallbladder) (hot and dry) (motio) (glassy phlegm) (this operation is manifesting strongly) (regimen administered) (inflation)
(liver) (hot and dry) (breathing) (strongly) (fast motio) (plentiful moisture) (hot and dry) (liver) (nourish the frame)

(the wild state) (fast motio) (inflation) (fast motio) (watery phlegm) (scorching the vessel)
(motio) (crude concoction) (frothing) (emanatio) (swelling) (motio) (congestion) (hot and dry) (dispersio) (hot and dry)

(slow emanatio) (invigorating the constitution) (caliditas) (slow dispersio) (piercing heat)
(motion and rest regimen) (dryness) (sweet phlegm) (this operation is manifesting strongly)

(slow dispersio) (wind) (motio) (wind) (this operation is manifesting strongly)
(fast dispersio) (thickening) (caliditas) (dispersio) (thickening) (restoration) (slow dispersio) (melancholic vapors) (blood warming pneuma) (temper corruption) (hot and dry)

(innate heat) (wind) (regimen administered) (blockage) (fast motio) (melancholic vapors) (temper corruption)

(dispersio) (glassy phlegm) (liver) (hot and dry) (food and drink regimen) (inflation) (liver) (hot and dry) (this operation is manifesting moderately)
(dispersio) (moisture) (hot and dry) (slow dispersio) (hot and dry) (blood warming pneuma) (this operation is manifesting strongly) (blood)

(ideal transformation) (congealing) (breath) (moderate) (this operation is manifesting moderately) (fast motio) (suffocatio) (caliditas) (fast distributio) (inflation) (evacuation & repletion regimen) (glassy phlegm) (motio) (crude concoction) (caliditas)

(slow motio) (inflation) (shivers) (fast motio) (hot and dry) (slow motio) (hot and dry) (motio) (air) (one degree) (blockage) (blood warming pneuma) (caliditas) (blood warming pneuma) (congealing) (mucilaginous phlegm) (blood warming pneuma)

(innate heat) (slow motio) (inflation) (slow motio) (thickening) (rekindling) (this operation is manifesting weakly) (blood warming pneuma) (this operation is manifesting strongly)

HUMAN-GENERATED TRANSLATION (BEST GUESS)

"Globally emanating is a fast moving hot and dry state that is warming the spirit/breath. It is causing a hot and dry fever in the head that is of the slow dispersing thickness kind. Administer an air and environment regimen for the shivers that are prompting a slow emanation to invigorate the constitution and causing sudden, but persistent wind.

The liver's moisture has been exhausted and it is running hot and dry. Administer a motion and rest regimen for the hot and dry state, then alter the regimen as a crude concoction forms, then alter the regimen as inflation sets in. There is a double-dose of glassy phlegm. This fast moving inflation where the corruption is in need of tempering and the frame in need of (re)nourishment.

Administer a regimen for the gallbladder that is running hot and dry, where the motion of glassy phlegm is manifesting doubly. Prescribe a regimen for the inflation, as the liver is running hot and dry and causing heavy, rapid breathing. Despite a fast-moving and plentiful moisture, the hot and dry liver is failing to nourish the frame.

The patient is in the wild state, tending towards choleric, which is causing a motion of inflation. A fast-moving watery phlegm is scorching the vessel. Movement of the crude concoction is causing frothing that is emanating a swelling. Moving is a congestion that is hot and dry and dispersing hot and dry.

Slowly emanating is a heat that is invigorating the constitution. For the slow dispersion of piercing heat, administer a motion and rest regimen for dryness. Sweet phlegm is an operation that is manifesting strongly.

Slow dispersion of wind and movement of wind is an operation that is manifesting strongly. Quickly dispersing is a thickening with heat. Dispersing the thickening results in restoration, slow dispersing melancholic vapors and blood warming the pneuma. Temper the corruption that is hot and dry.

For the innate heat's wind, administer a regimen for the blockage and fast moving melancholic vapors to temper corruption.

Dispersing is glassy phlegm and the liver is hot and dry. Administer a food and drink regimen for inflation as the liver is hot and dry, which is an operation that is manifesting moderately. The dispersion of moisture hot and dry and slow dispersion of hot and dry where the blood is warming the pneuma, which is an operation that is manifesting strongly and resolves into blood.

The ideal transformation is congealing the breath to the second degree, which is an operation that is manifesting moderately. Quickly move to suffocate the heat. Quickly distribute for inflation. Administer an evacuation and repletion regimen for the glassy phlegm. There will be heat moving in the crude concoction. Slow moving inflation causing shivers. Fast moving hot and dry. Slow moving hot and dry. Moving through air one degree of the blockage. Blood warms the pneuma and congeals. There is mucilaginous phlegm and the blood warms the pneuma.

For the innate heat, there is slow moving inflation and slow moving thickening. Rekindling is an operating that is manifesting weakly. Blood warms pneuma, which is an operation that is manifesting strongly."
